# Kenneth Go

gennethko@gmail.com | linkedin.com/in/go-kenneth-go | github.com/thekennethgo

## Education

**University of New South Wales (UNSW)** Sydney, NSW
*Bachelor of Computer Science, Distinction Average* *Sep. 2026*

- **Relevant Coursework:** Data Structures & Algorithms, Machine Learning, Operating Systems, Computer Networks, Database Systems, Security Engineering, Object-Oriented Design

## Technical Skills

**Languages**: Python, C++, TypeScript, JavaScript, SQL, Java, Rust, C
**AI / LLM**: Retrieval-Augmented Generation (RAG), Embeddings, Vector Search (pgvector), Reranking, LLM APIs
**Frameworks**: React, Next.js, Node.js, FastAPI, Flask, Atlassian Forge
**Tools & Cloud**: Git, GitHub Actions (CI/CD), Docker, AWS, PostgreSQL, Supabase, Render, Vercel, Agile/Scrum
**Certifications**: AWS Certified Solutions Architect – Associate (Aug. 2026)

## Experience

**Software Developer & Scrum Master** Feb. 2026 – Apr. 2026
*UNSW Client Project — Client: Atlassian* *Sydney, NSW*

- Built an AI-powered Jira prioritisation tool on Atlassian Forge, using AI-generated summaries to support backlog item management
- Led a team of 5 across 3 sprints, coordinating sprint planning, standups and retrospectives to deliver the university client project
- Presented 3 client demos and incorporated feedback into each iteration

**Casual Wait Staff** Jan. 2024 – Aug. 2026
*IIKO* *Sydney, NSW*

- Balanced full-time study with customer service work, coordinating with colleagues during high-volume shifts

## Projects

**RAG Visualised** | *Python, FastAPI, Next.js, pgvector* | ragvisualised.vercel.app Oct. 2026

- Built an open-source retrieval-augmented generation (RAG) application that visualises chunking, embeddings, retrieval, reranking and answer generation, with an interactive vector map and clickable source citations
- Implemented hybrid retrieval combining pgvector similarity search and PostgreSQL full-text search, reranking 20 candidates to select 5 passages for generation
- Evaluated retrieval and grounding with 100+ queries covering multi-hop questions, conflicting sources, unanswerable questions and prompt-injection attempts; added 270+ pytest and Vitest tests run through GitHub Actions

**Catchup** | *React, Supabase, LLM, Render* | catchup.app | Video Demo Mar. 2026

- Lead developer in a team of 3 that built a collaborative event-planning app with LLM-powered recommendations in 48 hours at UNIHACK 2026
- Implemented real-time synchronisation of shared availability and preferences using React and Supabase, and deployed the full-stack prototype on Render

**Whysper** | *JavaScript, React, Node.js, Supabase* | whysper.site Jul. 2025 – Sep. 2025

- Built an end-to-end encrypted chat application using React, Node.js and Supabase for a cybersecurity course
- Implemented RSA-based exchange of an AES key between two users, with AES encryption of message content

**Centra** | *Enterprise AI, RAG, Confidential Computing* Jun. 2025 – Aug. 2025

- Pitched an enterprise-AI venture at the Peter Farrell Cup 2025, validating the problem through 5+ industry interviews and researching secure RAG architectures on confidential computing
