Kenneth Go

gennethko@gmail.com | linkedin.com/in/go-kenneth-go | github.com/thekennethgo

Education

University of New South Wales (UNSW) Sydney, NSW
Bachelor of Computer Science, Distinction Average *Sep. 2026*

- **Relevant Coursework:** Data Structures & Algorithms, Algorithm Design & Analysis, Machine Learning, Operating Systems, Computer Networks, Database Systems, Security Engineering, Object-Oriented Design

Technical Skills

Languages: Python, C++, TypeScript, JavaScript, SQL, Java, Rust, C
AI / LLM: Retrieval-Augmented Generation (RAG), Embeddings, Vector Search (pgvector), Reranking, LLM APIs, Prompt Engineering
Frameworks: React, Next.js, Node.js, FastAPI, Flask, Atlassian Forge
Tools & Cloud: Git, GitHub Actions (CI/CD), Docker, AWS, PostgreSQL, Supabase, Render, Vercel, Agile/Scrum
Certifications: AWS Certified Solutions Architect – Associate (Aug. 2026)

Experience

Scrum Master & Developer — Jira Backlog Manager Feb. 2026 – Apr. 2026
Atlassian Client Project, University of New South Wales *Sydney, NSW*

- Led a team of 5 engineers as Scrum Master to deliver an AI-powered Jira prioritisation tool for an Atlassian employee client across 3 sprints
- Built the tool on Atlassian Forge (Jira's React-based app platform), using AI-generated summaries to streamline backlog item management
- Ran sprint planning, standups and retrospectives, and presented 3 client demos, incorporating real-world feedback into each iteration

Casual Wait Staff Jan. 2024 – Aug. 2026
IIKO *Sydney, NSW*

- Worked alongside full-time study, coordinating with team members in a high-volume service to improve customer satisfaction

Projects

RAG Visualised | *Python, FastAPI, Next.js, pgvector* | ragvisualised.vercel.app Oct. 2026 – Present

- Built an open-source web app that teaches retrieval-augmented generation (RAG), visually highlighting each pipeline stage (chunking, embedding, retrieval, reranking, generation) with an interactive vector map and clickable citations
- Implemented hybrid retrieval that combines pgvector similarity search with Postgres full-text search, then reranks the top 20 candidates to the best 5
- Benchmarked retrieval and grounding with a 100+ query evaluation suite spanning multi-hop, conflicting-source, unanswerable and prompt-injection cases (97.8% retrieval hit rate; 100% citation validity and injection resistance), backed by 270+ pytest and Vitest tests in GitHub Actions CI.

Whysper | *JavaScript, React, Node.js, Supabase* | whysper.site Jul. 2025 – Sep. 2025

- Built an end-to-end encrypted chat application using a hybrid RSA + AES cryptosystem implemented from scratch for a cybersecurity course
- Engineered a key exchange in which two users agree a shared AES key via RSA, so the server and network only ever see ciphertext

Catchup | *React, Supabase, LLM, Render* | catchup.app | Video Demo Mar. 2026

- Lead developer in a team of 3 that built a collaborative event-planning app with LLM-powered recommendations in 48 hours at UNIHACK 2026
- Implemented real-time multi-user synchronisation of shared availability and preferences with React and Supabase, and deployed the full-stack prototype on Render with a live demo video

Centra | *Enterprise AI, RAG, Confidential Computing* Jun. 2025 – Aug. 2025

- Pitched an enterprise-AI venture at the Peter Farrell Cup 2025, validating the problem through 5+ industry interviews and researching secure RAG architectures on confidential computing
